

How to run TikTok ads for s-prestige.com.cy

A start-to-finish plan: the accounts you need, how the link from TikTok to your website actually works, what to film, what to spend, and how to tell within two weeks whether it is working.

Prepared 2 September 2026

READ THIS FIRST

The short version

Your website turns visitors into customers in one way: they tap a WhatsApp or phone button. So the whole job of a TikTok ad is to get the right person onto the right page of **s-prestige.com.cy** with enough interest to tap that button. Everything in this plan serves that one path.

- **The link is not the hard part.** Every TikTok ad has a destination URL and a button built in. You paste your page address, TikTok makes it clickable. There is no follower requirement and no "link in bio" limitation on paid ads.
- **Send each ad to a matching page**, never to the homepage. A ceramic-coating video goes to the ceramic-coating page. Sending everything to the homepage is the single most common way to waste money.
- **Install the tracking pixel before you spend anything.** Without it you are guessing which ad brought the customer. It is a one-line setting on the website.
- **Run two separate campaigns**, because you have two different businesses: car services for Pafos locals, and rentals/excursions/transfers for tourists. They need different videos, different targeting, and different budgets.
- **Budget €300–€450 for the first month** and treat it as paid research, not as sales. Month two is when you scale what worked.

Step 1 — Get the accounts in place

You cannot advertise from a personal TikTok account. Do these in order; each one unlocks the next.

- 1 Switch your TikTok profile to a Business Account.** In the app: Profile → menu (≡) → Settings and privacy → Account → Switch to Business Account. Pick "Automotive" or "Travel & Tourism". This also unlocks the clickable website field on your profile — no follower minimum.
- 2 Create a TikTok Ads Manager account** at ads.tiktok.com. Country **Cyprus**, currency **EUR**, time zone **Asia/Nicosia**. The time zone is locked after creation and every report you ever read depends on it — get it right the first time.
- 3 Submit business verification.** TikTok will ask for your Cyprus company registration certificate or VAT registration, and the trading address. Approval usually lands within one to three working days. Unverified accounts get throttled and randomly paused, so do not skip it.
- 4 Enter your VAT number** under Payment → Billing information. As a VAT-registered Cyprus business you are then invoiced under the EU reverse-charge rule, meaning TikTok does not add VAT and you account for it yourself. Without the number you are charged VAT you cannot easily reclaim.
- 5 Add a payment card** and set **Manual payment** if you want a hard ceiling on spend while you learn, or Automatic if you would rather it never stops mid-flight.
- 6 Verify the domain s-prestige.com.cy** in Ads Manager under Tools → Domains. You already control the DNS, so this is a TXT record, the same kind you added for Vercel. It proves the site is yours and improves how reliably conversions are attributed to your ads.

One account, two businesses. Do not open two ad accounts for auto and tourism. One account, with separate campaigns inside it — the account learns faster when all the data is pooled, and billing stays simple.

THE PART YOU ASKED ABOUT

Step 2 — How the link actually works

There are four different ways a person gets from TikTok to your website, and they are easy to confuse. Only the first one is "TikTok ads"; the others are worth having anyway.

Route	How it works	Use it for
Ad destination URL (paid)	When you build the ad you fill a field called Website URL and pick a call-to-action button ("Learn more", "Book now", "Get quote"). TikTok renders the button over the video. One tap opens your page in TikTok's in-app browser.	Every campaign in this plan. No follower count needed.
Profile bio link (free)	The Website field on your Business Account profile. Clickable for business accounts regardless of follower count.	Set it to s-prestige.com.cy once and leave it. Catches people who look you up after seeing an ad.
Spark Ads (paid, boosts a real post)	You take a video already posted on your own profile and put money behind it. It keeps its likes, comments and your profile name, and gains the same clickable button as a normal ad.	Your best-performing organic videos. Usually cheaper per click than a cold-made ad because it looks like a real post.
Instant Page (paid, hosted by TikTok)	A landing page built inside TikTok that opens instantly instead of loading your site.	Skip it. Your site is already fast and static, and an Instant Page would cut you off from your own pages and tracking.

Tag every link so you can tell what worked

Add tracking parameters to the end of each destination URL. They change nothing for the visitor, but they let you separate TikTok traffic from everything else in your analytics. The pattern:

```
https://s-prestige.com.cy/detailing/ceramic-coating?utm_source=tiktok&utm_medium=cpc&utm_campaign=auto_detailing&utm_content=ceramic_beforeafter_01
```

Keep **utm_source** and **utm_medium** exactly as above every time. Change **utm_campaign** per campaign and **utm_content** per individual video, so you can see which specific clip is pulling its weight.

DO THIS BEFORE THE FIRST EURO

Step 3 — Turn on conversion tracking

TikTok needs to see what happens after the click, otherwise it cannot learn who to show your ads to, and you cannot tell a good ad from a bad one. Two things are needed.

A. Create the pixel in TikTok

In Ads Manager go to **Tools** → **Events** → **Web Events** → **Set up Web Events**. Choose **TikTok Pixel**, then **Manually install pixel code**. Name it "s-prestige.com.cy". TikTok gives you a **Pixel ID** — a long string of letters and numbers. Copy it.

B. Put the ID into the website

The website is already built to accept it. In your **Vercel** dashboard open the project, go to **Settings** → **Environment Variables**, and add:

Name	Value	Environments
PUBLIC_TIKTOK_PIXEL_ID	the Pixel ID you copied	Production

Then redeploy. That is the whole installation — no code editing, no Google Tag Manager. Leave the variable empty and the site ships no advertising script at all, so you can switch tracking off as easily as you switched it on.

Consent, because this is the EU. The pixel only loads after a visitor presses **Accept** on the cookie banner — that is a legal requirement in Cyprus, not an option. In practice a portion of visitors will decline, so TikTok will always report slightly fewer conversions than actually happened. Expect the gap; do not chase it.

What gets measured

Because your customers leave the site to talk to you, the pixel cannot see the actual sale. What it can see — and what you should optimise against — is the handover: the moment someone taps a WhatsApp or phone button. That fires a TikTok event called **Contact**, tagged with which button and which side of the business. Treat one **Contact** as one lead.

Verify it works before spending: install the **TikTok Pixel Helper** Chrome extension, open your site, accept cookies, tap a WhatsApp button, and confirm the extension shows a **Contact** event. If it does not, fix that first.

TWO CAMPAIGNS, FIVE AD GROUPS

Step 4 — Campaign structure

Your two businesses want different people. Keep them apart so that one cannot quietly eat the other's budget.

Campaign	Ad group	Send the click to	Who
AUTO — Pafos locals	Detailing & ceramic	/detailing /detailing/ceramic-coating	Pafos district, 25–55, car owners
	Headlight restoration	/detailing/headlight-restoration	Pafos district, 30–60
	Buy & sell	/buy-sell	Cyprus-wide, 25–55
TOURISM — visitors	Car rental	/tourism/rentals	In Cyprus now + UK/DE/PL pre-trip
	Excursions & transfers	/tourism/excursions /tourism/taxi	In Cyprus now, 25–55

Which objective to choose

TikTok asks for a campaign objective on the first screen. This trips up most beginners, so follow this sequence:

- **Weeks 1–2: choose Traffic.** It is cheap, it starts collecting pixel data immediately, and it does not need a conversion history to work. You are buying information about which videos and which audiences respond.
- **Week 3 onward: switch to Website Conversions**, optimising for the **Contact** event — but only once that event has fired roughly 50 times in a week. Below that, TikTok has too little signal and the campaign will underdeliver at a high cost. If you are not reaching 50, stay on Traffic longer.
- **Ignore Reach, Video Views and Community Interaction** for now. They buy eyeballs, not customers.

If TikTok offers you a WhatsApp or messaging destination in Cyprus, it is worth testing later as a second ad group — but keep the website route as your main one, because that is where your tracking and your pages live.

KEEP IT WIDE, LET THE ALGORITHM WORK

Step 5 — Targeting

The instinct is to narrow the audience until it is exactly your customer. On TikTok that backfires: a small audience raises your costs and starves the algorithm of the data it needs. Set the boundaries below and leave interests mostly open.

Setting	Auto (locals)	Tourism (visitors)
Location	Pafos district; add Limassol once it works	Cyprus (all) — catches tourists already on the island
Age	25–55	25–55
Gender	All	All
Languages	Greek, English, Russian	English, German, Polish, Russian
Interests	Leave open, or Vehicles / Auto care	Travel, Outdoor activities
Placement	TikTok only — turn off Pangle and the audience network	TikTok only — turn off Pangle and the audience network

Turn off Pangle. It is TikTok's third-party app network and it will happily spend your budget on clicks from mobile games that never convert. Under Placement choose **Select placement** and tick TikTok only. This one setting saves more wasted money than any other.

The tourist timing problem

Rental customers decide either weeks before they fly or on their first day in Pafos. Targeting Cyprus catches the second group, which is the easier win. For the first group, test one small ad group aimed at the UK, Germany and Poland in the shoulder months (March–May, September–October) when people are booking. Judge it separately — its cost per lead will look worse but the bookings are longer.

WHAT IT COSTS TO FIND OUT

Step 6 — Budget

Line	Amount	Note
TikTok ad group minimum	€20 / day	Platform floor. Below this an ad group will not run.
TikTok campaign minimum	€50 / day	Set campaign budget to "unlimited" and control spend at ad-group level instead.
Suggested start	€10–15 / day per ad group	Using a lifetime budget, which lets you go below the daily floor.
Month 1 total	€300–450	Two campaigns, two or three ad groups live at a time.
Decision point	after €150	By then you will have enough clicks to see which videos are working.

Run each ad group for a minimum of four uninterrupted days before judging it. Every time you edit budget or targeting you reset TikTok's learning and the first days' costs are wasted again. Set it, leave it, then decide.

THE PART THAT DECIDES EVERYTHING

Step 7 — What to film

Targeting and budget are hygiene. On TikTok the creative is what actually determines your cost per lead, and the difference between a good video and a bad one is not 10 percent — it is five times. Budget your effort accordingly.

Rules that apply to every video

- **Vertical 9:16, filmed on a phone, 9–21 seconds.** Shot on a phone is not a compromise here, it is the format. Polished agency-looking ads underperform badly.
- **The first two seconds decide it.** Open on the most visually striking moment — the dirty half of the seat, the yellow headlight, the car mid-turn on a coast road. No logo intro, no slow build.
- **Burn captions into the video.** Most people watch on mute.
- **Say where you are.** "Pafos" or "Kissonerga" in the first line of text. It filters out the wrong viewers, which lowers your costs.
- **End with the action** — "Message us on WhatsApp", matching the button.
- **Make 3–5 per ad group** and let them compete. Replace the losers every 7–10 days; TikTok audiences burn out on creative faster than any other platform.

Specific videos to shoot for your business

#	Video	Why it works
1	Before / after detailing. Split-screen or a wipe down the middle of a filthy interior turning clean. 15s, no talking, satisfying audio.	The highest-performing format in this entire category. You already have the before/after material on your site.
2	Headlight restoration in real time. One continuous shot, yellow to clear, sped up.	Instantly legible, obviously valuable, needs no explanation in any language.
3	Sand and salt out of a car interior. Extraction on a beach-used family car.	Speaks directly to everyone who lives near a Cyprus beach.
4	Rental walk-around. One car, keys, quick lap, then the coast road.	Sells the holiday rather than the vehicle. Point it at /tourism/rentals.
5	Akamas or Troodos excursion clip. 12 seconds of the actual view.	The destination sells itself; you are only supplying the transport.
6	Car listing walkthrough. One vehicle from /buy-sell, price on screen.	Price on screen filters out the browsers and pulls in serious buyers.

Post them organically first. Put each video on your own profile before paying to promote it. The ones that get traction on their own are the ones to put money behind, as Spark Ads — you will have pre-tested the creative for free, and Spark Ads typically cost less per click than ads built cold.

WHAT GOOD LOOKS LIKE

Step 8 — Reading the numbers

Check the account twice a week, not twice a day. Daily fluctuation is noise and reacting to it makes results worse.

Metric	Where it should land	If it is off
CTR (click-through rate)	Above 1%. Below 0.6% is a failing video.	The creative is the problem, not the targeting. Replace the video.
CPC (cost per click)	€0.10–€0.40 in Cyprus for this kind of business.	Above €0.60: audience too narrow, or Pangle is still switched on.
Contact rate	3–8% of clicks should tap WhatsApp or phone.	Below 2%: the landing page does not match what the video promised.
Cost per Contact	€3–€10 per lead is healthy at this scale.	This is your real number. Compare it to what one detailing job is worth.
Hook rate	25%+ still watching at 3 seconds.	Below that, your opening two seconds are wrong.

The number that actually matters

None of the above is profit. The only measurement that settles whether TikTok works for you is this: **ask every new customer where they found you, and write it down**. A ceramic coating job is worth several hundred euro; if one month of ads costs €400 and brings two coating jobs and a week of rentals, it paid for itself regardless of what any dashboard says. Keep a simple tally in a notebook or a phone note for the first two months — it will tell you more than the analytics will.

DO IT IN THIS ORDER

Step 9 — Four-week rollout

When	Do	Spend
Week 1	Switch to Business Account. Open Ads Manager, set Cyprus / EUR / Asia-Nicosia. Submit business verification and VAT number. Create the pixel, add PUBLIC_TIKTOK_PIXEL_ID in Vercel, redeploy, verify with Pixel Helper. Verify the domain. Film the first three videos.	€0
Week 2	Post the three videos organically. Launch the AUTO campaign, Traffic objective, two ad groups (detailing, headlights) at €10/day. Placement: TikTok only. Leave it alone for four full days.	~€140
Week 3	Kill anything under 0.6% CTR. Launch the TOURISM campaign with the rental video. Promote your best organic post as a Spark Ad. Film three replacement videos.	~€150
Week 4	Count Contact events. At 50+ per week, switch the winning campaign to Website Conversions optimising for Contact. Otherwise stay on Traffic and keep improving the creative. Compare the notebook tally against the spend.	~€150

AVOID THESE

Common ways this goes wrong

- **Sending every ad to the homepage.** The visitor has to hunt for what the video promised, and most will not. Match the page to the video.
- **Leaving Pangle placement on.** Cheap clicks, no customers.
- **Editing the campaign every day.** Each edit restarts the learning phase and re-burns the expensive early days.
- **Judging in 24 hours.** Four days minimum, then decide.

- **One video per ad group.** You need competition to find a winner.
- **Spending before the pixel is verified.** You will never know what worked.
- **Re-using a landscape Facebook video.** It will be ignored. Vertical or nothing.
